Director Viral Vector Production / Process Development

Our client is a dynamic innovator in the field of gene therapy. They have put together a team of internationally recognized experts in neurologic diseases. Phase I studies were completed with “landmark” results. Their lead product has been fast tracked by the FDA. Phase II studies to begin in 90 days.

Oversee viral vector production and process development for clinical grade material.
Manage vector production staff and tech transfer to CMO.
Write peer review journal articles, abstracts and prepare presentations.

Requirements:

7-20 years Process Development experience essential with DNA vectors, plasmid based viral vectors, recombinant proteins or MABs.
Experience with bioreactors, ideally with the Wave bioreactor.
Management experience.
Publication track record.
