

Spaltudaq Corporation, a privately-held biotechnology company based in Seattle, is focused on developing novel tumor-specific therapeutic antibodies for the treatment of cancer and infectious disease. The company's technology harnesses the power of the human immune system to identify tumor-specific or pathogen-specific monoclonal antibodies from human tissue samples. Come join a company on the move!

Associate Scientist/Scientist, Discovery Technologies

This individual will be responsible for implementing methods for discovery and prioritization of novel therapeutic antibodies and targets. Responsibilities will include development of assays for detection of specific reactivities in biological samples and determination of unknown target proteins' identity. Qualified candidates must possess a Ph.D. in Biochemistry, Bioengineering, Cell Biology or equivalent (BS or MS plus minimum 10 years experience), with a minimum of 6 years experience inclusive of post-doctoral training and appropriate research/development training (significant industry experience is preferred). Expertise with basic protein biochemistry and cell biology techniques as well as immunological, chromatographic, mass spectrometric and bioinformatics methodologies is essential. In addition, the successful candidate will exhibit strong critical thinking and communication skills, and enjoy working in a fast-paced, team-oriented environment.

Spaltudaq offers a team-oriented, stimulating work environment. Competitive compensation, benefits and stock options are offered. Please mail, email or fax your resume with cover letter to:

“Spaltudaq” is from the Lushootseed dialect of the indigenous Coast Salish people of Puget Sound and means “spirit canoe ceremony”, a practice once performed to prevent those stricken with disease from dying prematurely. Spaltudaq is founded on this challenge of helping those who are sick, particularly those individuals living with cancer and life-threatening infections.
